

XJ1 INTELLIGENT STEAM/HEATING MANAGER MIURA ON-LINE MAINTENANCE (MOM)

MIURA boilers are equipped with our microprocessor based XJ1 INTELLIGENT STEAM/HEATING MANAGER SYSTEM which allows you to instantly and easily check boiler operation status. You will have greater control over steam pressure settings or hot water temperature settings, plus ten points to measure the performance of your boiler. Critical boiler functions are continually monitored, and the system cautions the user before problems arise.

We are now offering our MIURA ON-LINE MAINTENANCE SYSTEM (MOM) in conjunction with the XJ1, which enables on-line communication from the boiler to our office. This offers immediate analysis of boiler operating conditions and parameters and allows on-line troubleshooting and analysis. As a further option, we can provide monthly reports summarizing burner history, fault history, thermal control and maintenance data, scale monitor graph and calculated fuel consumption.

MIURA BOILERS ARE SHIPPED WITH MODEM INCLUDED - READY TO CONNECT TO YOUR DEDICATED PHONE LINE. Multiple installations of 2 or more boilers are equipped with a LAN/Modem - at no extra cost.
